

## Quantitative Data Analysis 2

### Lab

14 January 2025

1. You have been assigned to a team to work on the American National Election Study (ANES) for 2020, 2016, or 2012. Work with your team on this project. Do not work individually.
2. Download your assigned dataset from <https://electionstudies.org/>
3. Read your data into R. Be aware that this is one of the challenging parts of today's lab.
4. Select a few variables that look interesting to you. Produce informative descriptive statistics and figures on these variables.
5. Select a few variables and produce a simple regression model. Assess the extent to which the model's assumptions are satisfied or violated.
6. Discuss the results.
7. You will NOT be graded.
